

Article Title (bold, Times New Roman, 12 points, the first letters of the words be in capital)

Abstract (150 to 250 words, the abstract should not contain any undefined abbreviations or unspecified references. The abstract should be organized as follows: introduction, methods, results, and conclusion.)

Keywords: xxxxx, xxxxxx, xxxxxx, xxxxx, xxxxx

1. Introduction

The introduction functions as the cornerstone upon which the entirety of the research is constructed. It effectively captivates the reader's attention, imparts pertinent contextual information, articulates the study's purpose, and establishes the platform for ensuing sections of the article. Ensure that any citations or references in the introduction section are formatted according to the journal's specified citation style (National Library of Medicine's (NLM))

References in text, tables, and legends should be numbered consecutively in the order they are cited in the text using Arabic numbers in parentheses. When multiple references are cited at the same place in the text of a document, use a hyphen to join the first and last references if they are inclusive. Use commas without spaces to separate exclusive references.

Abbreviations and acronyms in the text should be explained in parenticals where the word first appeared and the same abbreviations should be used throughout the entire text.

When a drug, product, hardware, or software program is mentioned within the main text, product information, including the name of the product, the producer of the product, and city and the country of the company (including the state if in USA) should be provided in parentheses in the following format: "Discovery PET/CT scanner (General Electric, Milwaukee, WI, USA)".

2. Methods

The study area, methods for data collection, and analysis can be written here. Previously published procedures should be referenced. If your Methods section includes subheadings (e.g., for different subsections like Study Design, Data Collection, Statistical Analysis, etc.), ensure they are formatted according to the journal's guidelines. For example:

2.1 Data collection

2.2 Experimental study

3. Results

Figures, graphics, and photographs should be given on a separate file (in TIFF or JPEG format) through the submission system. All figures are to be numbered using Arabic numerals (e.g., Fig 1).

Tables must be created in Microsoft Word table format. Each table should be self-explanatory.

All tables are to be numbered using Arabic numerals (e.g., Table 1).

For each table, please supply a table caption (title) explaining the components of the table.

If your Results section includes subheadings (e.g., for different subsections like Experimental Results, Statistical Analysis, etc.), ensure they are formatted according to the journal's guidelines. For example:

3.1 Experimental results

3.2 Statistical analysis

If your Results section includes figures, tables, or other visuals, ensure they are appropriately formatted and labeled according to the journal's guidelines. Figures and tables should always be cited in text in consecutive numerical order (e.g., **Fig 1, Table 1**).

4. Discussion (This section may be combined with Results)

In this part, you need to discuss your results and compare your findings with other research, highlighting the strengths, weaknesses and suggesting some ideas, new research and etc.

5. Conclusion

Summarize the main findings and their implications concisely.

Acknowledgment (if any)

Declarations

If any of the sections are not relevant to your manuscript, please include the heading and write 'Not applicable' for that section. For examples:

Funding: The research reported in this paper was funded in part by [Name of Funding Agency] under grant number [Grant Number].

Information that explains whether and by whom the research was supported.

Conflicts of interest: The authors declare no conflicts of interest related to this work.

Ethics approval: Not applicable

Include appropriate approvals or waivers.

References (Vancouver citation style) All references should contain DOI numbers.

References should be listed at the end of the paper in numerical order.
